Recent crises in emerging markets have been heavily driven by balance-sheet or net-worth effects. Episodes in countries as far-flung as Indonesia and Argentina have shown that exchange rate adjustments that would normally help to restore balance can be destabilizing, even catastrophic, for countries whose debts are denominated in foreign currencies. Many economists instinctually assume that developing countries allow their foreign debts to be denominated in dollars, yen, or euros because they simply don't know better. Presenting evidence that even emerging markets with strong

policies and institutions experience this problem, Other People's Money recognizes that the situation must be attributed to more than ignorance. Instead, the contributors suggest that the problem is linked to the operation of international financial markets, which prevent countries from borrowing in their own currencies. A comprehensive analysis of the sources of this problem and its consequences, Other People's Money takes the study one step further, proposing a solution that would involve having the World Bank and regional development banks themselves borrow and lend in emerging market currencies.

There is a difference between surviving in college and thriving in college, especially when considering the change in environment for first-year students. They are expected to take on new roles and responsibilities such as speaking up in class, approaching instructors, making new friends, performing under pressure, dealing with financial struggles, and making healthy lifestyle choices on their own. With so many changes and challenges to deal with at once, it often results in a stressed-out student. In fact, persuasive evidence shows stress is the single most reported obstacle to academic success in college (CHRONICLE OF HIGHER EDUCATION, 2009). This is especially true of first-year students. In surveys conducted by the American College Health Association (2009) and the Cooperative Institutional Research Program (2009), half of all students reported feeling plagued by stress in the previous year. One-third found that there were times they were so overwhelmed that they could barely function on a daily basis. EXCELLING IN COLLEGE encourages students to perform their best using critical-thinking skills and stress management. By using exercises, in-class activities, and videos, readers learn how to manage these challenges in order to better maintain relationships with family and friends. These skills are not only helpful during college but also carry through the post-academic career. A rigorous theory of money, credit, and bankruptcy in the context of a mixed economy, uniting Walrasian general equilibrium with macroeconomic dynamics and Schumpeterian innovation. This book offers a rigorous study of control, guidance, and coordination problems of an enterprise economy, with attention to the roles of money and financial institutions. The approach is distinctive in drawing on game theory, methods of physics and experimental gaming, and, more generally, a broader evolutionary perspective from the biological and behavioral sciences. The proposed theory unites Walrasian general equilibrium with macroeconomic dynamics and Schumpeterian innovation utilizing strategic market games. Problems concerning the meaning of rational economic behavior and the concept of solution are noted. The authors argue that process models of the economy can be built that are consistent with the general equilibrium system but become progressively more complex as new functions are added. Explicit embedding of the economy within the framework of government and society provides a natural, both formal and informal, control system. The authors describe how to build and analyze multistate models with simple assumptions about behavior, and develop a general modeling methodology for the construction of models as playable games.

In this report The Electronic Communications Code the Law Commission makes recommendations to form the basis of a revised Electronic Communications Code, which was originally enacted in 1984 to regulate landline telephone provision. It sets out the regime that governs the rights of designated electronic communications operators to maintain infrastructure on public and private land. In modern times, it applies to the infrastructure forming networks which support broadband, mobile internet and telephone, cable television and landlines. The current Code has been criticized by courts and the people who work with it as out of date, unclear and inconsistent with other legislation. This project focuses on private property rights between landowners and electronic communications providers, it does not consider planning. The aims of the reforms are: to provide a clearer definition of the market value that landowners can charge for the use
